- A. Validate rules allow us to compare conditions however they must be referenced in order to work.
- B. Validate rules allow us to record an expected relationship between properties and have the system manage them
- C. Edit Validate rules allow us to record an expected relationship between properties and have the system manage them
- D. Edit Validate allow us to compare input values with an exact pattern using a Java statement

Answer: A, D

Question: 2

You are designing a travel plan application. A hotel booking step displays a form in which users select a hotel and enter their check-in and check-out dates. The application calculates and then displays the cost for the hotel at an extra cost. The application totals the cost for any selected options and adds that amount to the total room cost to equal the grand total, which is displayed in a field. Which two of the following properties would you use as the target properties ? (Choose two)

- A. Total cost for the hotel room
- B. Price of each option
- C. Total cost of options
- D. Number of days at the hotel

Answer: A, C

Question: 3

A manager has requested a report that shows the purchase requests for each of the regional cost centers. The manager wants to organize the results so the cost center appears only once on the report and the requests are listed under cost center. How would you configure the report definition ?

- A. Filter the results so that only cost center and requests are included in the report
- B. Use the cost center column to group the results
- C. Use the requests column to group the results
- D. Summarize the requests column by count

Answer: B

Question: 4

How does assignment routing improve efficiency ?

- A. By assigning work to the currently available party
- B. By assigning work to the most appropriate parties
- C. By assigning work to the most senior party in a work group
- D. By assigning work to the party in the appropriate time zone

Answer: B

Question: 5

Select the use case that requires an integration by using robotic process automation (RPA).

- A. An online ordering application submits credit card information to a payment processor through a web service.
- B. An order management application updates a customer profile in a legacy system that lacks an exposed API.
- C. A drug trial management application submits trial data to a protected system through a secure connection.
- D. A service management application lists paint options sourced from a Pega Platform data object.

Answer: A
